-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

1. Applicant in response to the restriction requirement elected Group I, claims 1-7, of the invention without traverse. Accordingly, claims 8-22 stand withdrawn from further consideration. The restriction requirement is hereby made Final.

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Fields et al.

Fields et al. substantially show the invention as claimed (see figure 8, the forward portion of the internal part which includes ball joint 160 is considered to be an adapter) except that they do not disclose whether the adapter is made of beryllium copper. However, in col. 4, line 52+ of the patent, it discloses that the piston, or ram is preferably made of beryllium copper alloy. It would have been obvious to make each part of the piston with same material (i.e. beryllium copper) such that they all have the same thermal expansion coefficient and thereby to obtain a better join between parts during the casting cycle. Also, it would have been obvious to made the adapter with beryllium copper alloy in view of its combination properties of excellent thermal conductivity and the mechanical strength.
